

Perforated columns

These perforated columns are used for attachment to the back edge of pack and work tables, for use with our extensive range of accessories. The pillars are delivered in pairs and consist of 2 profiles of 25x50x2 mm. The net height above the table top is approximately 400 mm less than the height of the column, (depends on the thickness of the table top). The mounting kit must be ordered separately. NOTE 1 set per column, i.e. 2 mounting kits for this article. For increased stability in the superstructure, you can use intermediate braces for the desired CC dimensions.

Choose between the different lengths of perforated columns depending on what you have in mind for the extensions and assessors you want.
