

## Support chair Muvman Industry ESD

Unique and movable standing support chair that can be used in environments where there are requirements for ESD. The chair is delivered in black underframe and black PU seat. The product has an integrated handle at the back of the seat that makes it easy to move. The seat height can be adjusted from 510-840mm, which means that it is suitable for most individuals.

Muvman for better back health. Muvman senses how your center of gravity changes and follows your movements forward, backward and sideways. This means several important advantages. It makes it almost impossible to sit with a crooked back and it automatically strengthens the important stabilizing muscles. Muvman is the perfect seating solution for active people who alternately want to sit while maintaining good posture both in a lower sitting position and right up to standing height as a standing support. With its unique stroke length, Muvman provides both active sitting and active standing support. The patented active suspension in the liftomat regulates the inclination of the chair so that you always sit straight in the back while maintaining good posture.
