

## Packing table with scale and belt

Complete electrically adjustable packing table in versions such as scale and belt table.

Table stand is a Table 400 with size 2000 x 800 mm and electrically adjustable working height, including 32 mm gray high-pressure laminate table top.

The table's maximum load applies to the table with a spread load, the maximum weight of the belt machine is 40 kg, the lifting speed applies to an unloaded table.

The table is equipped with a stable intermediate brace. The table is equipped with a tape machine made by Cyklop model M-Pac 5. The M-Pac 5 is a semi-automatic tape machine. The machine is used to strap various packages with PP strapping.

With the strapping machine, you can choose between different impact tension (for light and durable packages) and torque tension. Welding time and temperature are easy to adjust, making the band machine suitable for a variety of applications. The machine is quiet 57 dB. Under the belt machine is a platform scale, model PV490 from Scandinavian Scale.

The scale has a maximum load of 150 kg, but in this application this maximum weight is limited to 40 kg due to the tape machine, resolution 50g. Display for the scale is placed on the table top.
